

Router Bit Guard

5-3/4" Width x 3-1/2" Height x 2" Projection

Don't take guarding for granted.

Accidents happen far too easily when guards are removed.

This simple yet effective guard will help keep fingers away from the rotating router bit regardless of bit size.

Guarding is especially necessary when using larger, more aggressive router bits such as moulding bits, rail & style bits and panel bits.

This package includes two 1/4-20 hex head bolts and two fixture knobs.

Your next project just got easier!

Sold separately, 1/4-20 T-Bolts will allow the guard to be mounted to T-Track that accepts T-Bolts only.
