

Router Inlay Bushing Set

Many of us own an inlay bushing set that was designed for a 1/8" router bit.

That's great for small inlays but when you are doing larger or thicker inlays, a 1/8" bit is too slow and too fragile.

This bushing is designed with a 3/8" offset so you can use a 3/8" router bit.

Includes offset ring and wrench in pouch.

Your next project just got easier!
