

## Brass Set-up Bars

How do you set the height of your router bit, table saw blade or shaper cutter exactly at 3/8" depth of cut?

Set-up Bars turn this tedious task into an easy task.

Just try to set this up without Set-up Bars and you'll find you need an expensive height gauge or dial indicator. Not so when you own this set of Set-up Bars.

It's as simple as sliding the 3/8" bar along the cutter (non-rotating of course) and raise the cutter until the two are even in height.

At 4" long, this set is extra long for bridging openings around the cutter. Short bars do not yield accurate readings when the end of the bar hangs over the opening around the cutter.

Set includes 1/8", 3/16", 1/4", 3/8" & 1/2"

**Your next project  
just got easier!**
