

Spiral Bit

This is a solid carbide router bit 3/16" diameter x 1" cutting length. It's perfect for routing inlays, sign boards, small mortises and generally anywhere detailed routing is needed.

Spiral router bits clear the chips from the cutting area which extends the life of the bit because it isn't re-cutting chips of wood. The shear action of the spiral cutting edge leaves an exceptionally clean cut with less chipping.

We recommend caution be used with carbide bits this small. Shallow cuts and possibly multiple passes especially in hardwoods are required to avoid breakage.

**Your next project
just got easier!**
