

J-Roller for Laminates

- Steel handle.
- The overall length of the J-Roller is 12 inches.
- The hard rubber roller is 3 inches wide, 1-3/8 inch diameter

Applying laminates can be a challenging task at the best of times. So make sure you have it down tight by using this J-roller.

The 3 inch hard rubber roller has just enough softness so you can easily apply even pressure across the roller width, pressing every inch of laminate for a smooth, even and tightly glued result.

**Your next project
just got easier!**
