

Spring Hammered Punch

Once you start using this punch you'll wonder why you took so long to buy one!

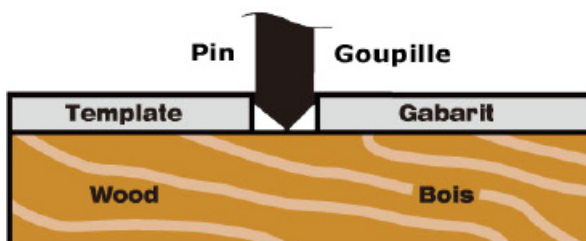

It really does make marking positions so much easier to do.

It works just like a centre punch... except you don't need a hammer!

- The internal spring-applied hammer of this punch allows you to position the punch and hammer the mark without the use of a traditional striking hammer.
- The hammer spring tension is adjustable by rotating the handle.
- Hardened for wood or metal punching.

PLUS... The parallel tip design of this punch allows it to be used for template marking!

BONUS! FREE self-centering tip for marking passage door hinge screw positions.
