

# Magnetic Switch

Magnetic disconnect switches protect you from unexpected startups after a power interruption by the power company.

They also protect your equipment from thermal overload by limiting the current available to the motor.

Magnetic Switches #16099 & #16100 have the square button.

Round stop offers dual safety.

- Press to Stop and it locks depressed. Green Start will NOT operate.
- Turn black ring and release the lock. Green Start will operate.

# Dustless Connectors

Dustless connectors prevent dusts from entering into electrical boxes and panels. A special rubber squeezes down onto round flexible electrical cable to make the dustless seal. On the box side, a nut and washer tighten the connector to the box. CSA approved.

Image shows top view and side view.

Sold Individually
