

Re-Grip Replacement Handles

Don't throw your tools away just because the handle's worn!

Re-Grip has been designed to redistribute energy created by impact & add comfort to the repetitive motion task. Placing it on all types of levers and handles can help prevent these disorders while providing comfort & durability.

- Affordable
- Non-slip for better control and safety
- Ergonomic design reduces muscle fatigue

Re-Grip is Eco-Friendly. They use recycled materials in their products.

RE-GRIP can be applied to a wide variety of cylindrical and semi-cylindrical objects such as tools, levers, sports equipment and handle bars, to name just a few of the uses. RE-GRIP not only provides mechanical and environmental protection, but enhances safety and comfort.

Replacement and supplementary grips are uncommon because handles come in a variety of shapes and sizes and replacing a handle is generally a difficult process. Replacement grips are available, but tend to be very specific to a particular handle and application, such as golf clubs or tennis rackets. These are usually replaced by professionals because of the difficulty and expertise required. A replacement grip like dip grips or spray grip simply don't work very well. RE-GRIP fills the void by providing durability without sacrificing comfort; it can be installed on almost any handle and is easy enough that anyone can add a new grip.
