

Glue Bottle & Nozzles

Gluing and woodworking go hand in hand so why not make it an easy task by having the right tools for the job?

16600 Pin Point Tip Glue Bottle - Handy for gluing but needs proper clean-up after use.

This is a great accordion bottle for placing the smallest drop of oil on bearings and machine parts.

16602 Glue Bottle with Cap - This soft semi-transparent polyethylene bottle lets the contents be seen and easily applied with a light squeeze. The standard thread size accepts 5 accessory nozzle caps to match any gluing job.

Includes basic cap to keep contents fresh for the next project.

16603 Flat Tip Glue Nozzle - This nozzle is specifically for applying glue into biscuit grooves.

Just insert the nozzle and squeeze the bottle briefly to inject the appropriate amount of glue. Extremely quick with precision glue positioning.

16604 Biscuit Tip Glue Nozzle - This nozzle is very convenient for controlled glue application in biscuit grooves.

The nozzle has a flat profile so it can be inserted into a biscuit slot. When squeezed, glue exits the nozzle through the thin sides, not from the end like most nozzles. By exiting the thin sides, the glue immediately comes into contact with the sides of the biscuit slot, exactly where it needs to be put for contacting biscuits.

Includes a cap to help prevent the glue drying between applications.

16605 Fine Tip Glue Nozzle - Put the glue exactly where it's needed with this extra fine nozzle.

Whether you need a drop or a long fine line of glue, this nozzle is very handy in the workshop.

16601 The BJ Complete Glue Bottle Kit (shown above) has five matching tops to match the project you're working on. Kit includes:

- Flat Tip Nozzle
- Biscuit Tip Nozzle
- Fine Tip Nozzle
- Brush Tip Nozzle
- Roller Tip Nozzle
- Bottle with Cap

16606 Brush Tip Glue Nozzle - Spreading glue over a larger area is always a mess unless you have this. The glue enters the brush head from the base of the brush allowing even and smooth application of glue right where you need it.

Includes cap for covering the brush head between applications.

16607 Roller Tip Glue Nozzle - When gluing thicker material and larger areas, this roller head helps to spread the glue... quick and cleanly. The roller is easily removed for soaking in the sink to remove fresh glue or old residue.

Includes plug for sealing the container when the head is stored on the glue bottle.
